Register in advance at: https://us06web.zoom.us/webinar/register/WN_t3MR_09jQQeX6YjzjSHjVA

Soon after registering, you will receive a confirmation email containing information about joining the webinar.

The Pediatric PT & OT CEU Series is sponsored by the New Mexico Leadership Education in Neurodevelopmental Disabilities Program (**NMLEND**) at the UNM Center for Development and Disability (CDD) and the UNM HSC Department of Pediatrics, Occupational Therapy Program.

This course will encourage learners to develop a broader understanding of the importance of Universal Design principles and propose ways to advocate for the use of these principles to develop improved access to fitness and recreation facilities by all. The concept of Primary Use will be discussed as it relates to the design of facilities, providing a means to promote physical activity participation among people who have disabilities. Resources will be provided that can be used by PT and OT practitioners to assess current fitness facilities for accessibility as well as to present a case to local organizations, funders, and community partners to facilitate improved access for the people they serve.
